

PDD KZ

Application & Functional Presentation

A SwiftUI iOS app for exam practice, mistake review, AI guidance, subscriptions, and daily learning retention.

iOS + WidgetKit + watchOS

AI: Akzhol assistant

What The App Does

The app is built around a learner journey: start, practice, test, understand mistakes, and

848

question bank

40

trial exam questions

32/40

pass threshold

72

course tasks

- Official-style trial tests and individual tests based on saved mistakes.
- Akzhol AI assistant explains traffic rules, images, and wrong answers.
- Progress, streaks, favorites, history replay, profile settings, and subscription

Onboarding & Account Setup

First screen, asks key learner preferences, then routes to auth

- Carousel explains the value of the PDD preparation
- Survey captures vehicle category, region, and current
- Sign in supports Apple, Google/Firebase, and guest
- Loading and social-proof screens complete the funnel

Testing Experience

The business with trial testing, road-sign detection, work on

- Standard Kazakhstan trial exam uses 40 questions and an
- Individual testing is generated from the MistakesBank, so
- History rows store score, date, pass/fail status, question
- Sound effects, haptics, favorites, and answer

Course & Quiz Logic

Behind the UI is a deterministic learning catalog and quiz state machine.

Catalog

8 cards: easy x3, medium x2, advanced x3. Each card has 2 modules and 9 tasks, giving 72 total tasks.

Quiz Engine

Tracks current question, selected answer, submitted state, timer, score, replay choices, favorites, and final result.

Persistence

Updates ProgressStore, TestHistory, MistakesBank, StreakStore, usage limits, and WidgetSnapshot after quiz completion.

Akzhol AI Assistant

Akzhol AI Assistant, available from its own tab and from quiz

- Chat persona: experienced Kazakhstan traffic inspector,
- Supports text conversation and image attachments
- Uses on-device FoundationModels on eligible iOS 26
- Falls back to Gemini REST models for cloud replies and
- Wrong-answer context can be sent to Akzhol for focused

Profile Progress & Settings

TI learning state visible and gives users control over

- Shows learner name, license category, provider badge,
- Settings include notifications, haptics, sound, animations,
- Favorites and test history let users revisit important or
- Supports premium entry point, app rating, sharing, privacy,

Premium & Monetization

Users are converted into a subscription paywall while keeping the core

- Weekly and monthly plans are selectable in the current
- Premium messaging highlights videos, tests, Akzhol
- Akzhol has a free-turn limit before premium gating.
- Purchase and restore calls are handled by

Apple Ecosystem Support

The project includes extensions beyond the phone app.

WidgetKit

progress + streak widgets

watchOS

companion streak view

Sync

shared snapshot data

- Home-screen and lock-screen widgets show percent progress, correct answers, current streak,
- The watch app displays current streak, progress gauge, record, and correct-answer count.
- WidgetSnapshot and WatchConnectivity keep external surfaces aligned with quiz activity.

Functional Map

The current codebase already covers the major product layers needed for a complete

Acquisition

Splash, onboarding, survey, auth, social proof

Learning

Course catalog, videos, useful materials, multilingual

Testing

Timed trial exam, individual mistake exam, replay history

Assistance

Akzhol text/image chat and mistake explanations

Retention

Progress, streaks, widgets, watch companion,

Business

Paywall, subscription gate, free usage limits
